

DANCOVER[®]

Manual
for
Rope Light

Precaution

- ◆ Don't cover the rope light or place in an area where heat can't escape. It will cause the rope light overheat and melt.
- ◆ Don't turn on the rope light before it is uncoiled. This will cause it overheat.
- ◆ Don't flex and bent the rope light continuously.
- ◆ Don't submerge the rope light in water.
- ◆ Don't put the rope light in a damp area without the connector joints being sealed with silicon glue.

Rope light is water tight but when used outdoors in an area that is damp or could get wet, seal all connections with silicone or silicone tape. Never submerge in water.

Installation

Where do I cut the rope light?

There is a scissor mark on the rope indicating where to cut. Be very careful to cut cleanly and only where indicated. If you cut elsewhere, it will ruin that stretch of light and cause it to go dark. After you have cut the rope light, don't forget to trim the copper wires from the cut ends.

How do I attach the connector kit to the rope light?

- Place the plastic end-cap on the end of the rope farthest from where the power source will be. The end cap is necessary to prevent water from getting in to the rope light wiring and creating an electrical short circuit.

b. Use the rope light connector to connect two sections rope light together:

STEP 1

Unscrew the connector parts.

STEP 2

Push the connector pins into the rope light towards the trimmed wires. Screw the cover back on that side. Do the same with the other side (just remember to put the connector cover on the rope light first so you can screw it tight after you have pushed the two parts together).

STEP 3

NOTICE: When two sections are connected, try to power it on and check whether the rope lights work or not. If the rope lights do not work simply remove the connector from the rope light and turn the rope light or the connector 180 degree due to the positive and negative poles.

STEP 4

NOTE: If you need to use your rope light outdoors you must seal the connector with silicone glue as it is not waterproof!

How to mount the rope light?

You can use a mounting clip or mounting channel to attach the rope light with place which you want.

Application

It is easy to be installed and widely used for outdoor landscape, decorating around a patio or barbecue area, entry ways, doorways, out line rooms, or use as rooflights. You can put them in the kitchen underneath or above the cabinets. You can also use them on your boat or RV.
